

**PRODUCT NAME:**

SCAFFOLDING HOOKS

**PRODUCT CODE/S:**

031177

**KEY FEATURES:**

Key Features

- Heavy-Duty Construction – Made from high-strength steel or aluminum alloy for enhanced durability and load-bearing capacity.
- Large Gate Opening – Typically featuring a 50mm or wider gate opening to easily connect to scaffolding tubes and anchor points.
- Double-Action Locking Mechanism – Prevents accidental disengagement, ensuring maximum safety.
- Corrosion-Resistant Finish – Treated with anti-corrosive coatings to withstand harsh weather conditions and industrial environments.
- Ergonomic Design – Smooth operation with a user-friendly latch for quick and secure attachment.
- EN 362 or ANSI Certified – Meets international safety standards for fall protection.

**DETAILS:**

Product Overview

Scaffolding hooks are essential safety components used in fall protection systems, ensuring secure attachment to scaffolding, anchor points, and other structures in high-risk work environments. Designed for durability and ease of use, these hooks provide a reliable connection for lanyards, safety harnesses, and lifelines.

Technical Specifications

- Material: High-strength steel/aluminum alloy
- Gate Opening Size: 50mm or larger
- Locking Mechanism: Double-action/self-locking latch
- Finish: Galvanized, anodized, or powder-coated for corrosion resistance
- Compliance: EN 362:2004, ANSI Z359.12 standards
- Usage: Compatible with lanyards, harnesses, and fall arrest systems

Applications

- Scaffolding and construction work
- Tower climbing and maintenance
- Roofing and industrial safety
- Confined space entry and rescue operations
- Fall protection for elevated work environments
